← Project review - SQL1 Bootcamp. Day01

Type of project Individual (Duration 30 min Passed Peer Reviews 0/3 Git project ssh://git@repos-ssh.21-school.ru:2289/students/SQL_beginner._Day01.ID_574087/kell... Copy link Open Student kellabul@student.21-school.ru level 8

Introduction

About

The methodology of School 21 makes sense only if peer-to-peer reviews are done seriously.

Please read all guidelines carefully before starting the review.

- Please, stay courteous, polite, respectful and constructive in all communications during t his review.
- Highlight possible malfunctions of the work done by the person and take the time to disc uss and debate it.
- Keep in mind that sometimes there can be differences in interpretation of the tasks and t he scope of features. Please, stay open-minded to the vision of the other.
- If you have not finished the project yet, it is compulsory to read the entire instruction bef ore starting the review.

Guidelines

- Evaluate only the files that are in src folder on the GIT repository of the student or group.
- Ensure to start reviewing a group project only when the team is present in full.
- Use special flags in the checklist to report, for example, an "empty work" if repository do es not contain the work of the student (or group) in the src folder of the develop branch, or "cheat" in case of cheating or if the student (or group) are unable to explain their work at a ny time during review as well as if one of the points below is not met. However, except for cheating cases, you are encouraged to continue reviewing the project to identify the probl ems that caused the situation in order to avoid them at the next review.
- Doublecheck that the GIT repository is the one corresponding to the student or the group.
- Meticulously check that nothing malicious has been used to mislead you.
- In controversial cases, remember that the checklist determines only the general order of the check. The final decision on project evaluation remains with the reviewer.

Main part

Exercise 00

Checks for the file day01_ex00.sql

- The SQL script looks like below.

```
select id as object_id, pizza_name as object_name from menu union select id, name from person order by 1,2;
```

- The result is below (row ordering for 1st column should be the same like on a screen belo w, but ordering for second column depends on system options)

```
"1" "Anna"
"1" "cheese pizza"
"2" "Andrey"
"2" "pepperoni pizza"
```

"Kate"

"3"

```
וואוו
     "sausage pizza"
"4"
     "Denis"
"4"
     "supreme pizza"
"5"
     "cheese pizza"
"5"
     "Elvira"
"6"
     "Irina"
"6"
     "pepperoni pizza"
"7"
     "Peter"
"7"
     "sausage pizza"
"8"
     "cheese pizza"
"8"
     "Nataly"
"9"
    "Dmitriy"
"9"
    "mushroom pizza"
"10" "cheese pizza"
"11" "supreme pizza"
"12" "cheese pizza"
"13" "mushroom pizza"
"14" "pepperoni pizza"
"15" "sausage pizza"
"16" "cheese pizza"
"17" "pepperoni pizza"
"18" "supreme pizza"
```

No

Yes

Exercise 01

```
Checks for the file day01_ex01.sql
```

- The SQL script looks like below.

```
select t1.object_name
from (select pizza_name as object_name, 'menu' as label
  from menu
  union all
  select name, 'person' as label
  from person
  order by label desc, object_name) as t1
```

```
"Andrey"
"Anna"
"Denis"
"Dmitriy"
"Elvira"
"Irina"
"Kate"
"Nataly"
"Peter"
"cheese pizza"
"cheese pizza"
```

```
"cheese pizza"
 "cheese pizza"
 "cheese pizza"
 "mushroom pizza"
 "mushroom pizza"
 "pepperoni pizza"
 "pepperoni pizza"
 "pepperoni pizza"
 "pepperoni pizza"
 "sausage pizza"
 "sausage pizza"
 "sausage pizza"
 "supreme pizza"
 "supreme pizza"
 "supreme pizza"
No
            Yes
```

Exercise 02

Checks for the file day01_ex02.sql

- The SQL script looks like below.

select pizza_name from menu union select pizza_name from menu order by pizza_name d esc

The result is below (raw ordering should be the same like below)

supreme pizza sausage pizza pepperoni pizza mushroom pizza cheese pizza

No

Yes

Exercise 03

Checks for the file day01_ex03.sql

- The SQL script looks like below.

select order_date as action_date, person_id from person_order intersect all select visit_date, person_id from person_visits order by 1,2 desc

```
"2022-01-01" "6"
"2022-01-01" "2"
"2022-01-03" "7"
"2022-01-04" "3"
"2022-01-05" "7"
"2022-01-06" "8"
"2022-01-07" "8"
"2022-01-07" "4"
"2022-01-08" "4"
"2022-01-09" "9"
"2022-01-09" "5"
"2022-01-10" "9"
```

No

Yes

Exercise 04

Checks for the file day01_ex04.sql

- The SQL script looks like below.

```
select person_id
from person_order
where order_date = '2022-01-07'
except all
select person_id
from person_visits
where visit_date = '2022-01-07'
```

- The result is below (raw ordering should be the same like below)

```
"4"
"4"
```

No

Yes

Exercise 05

Checks for the file day00_ex05.sql

- The SQL script looks like below.

```
select *
from person cross join pizzeria
order by person.id, pizzeria.id
```

```
"1" "Anna" "16" "female" "Moscow" "1" "Pizza Hut" "4.6"
```

```
"1"
     "Anna"
              "16"
                       "female" "Moscow"
                                              "2" "Dominos"
                                                                "4.3"
"1"
              "16"
                       "female" "Moscow"
                                              "3" "DoDo Pizza" "3.2"
     "Anna"
"1"
     "Anna"
              "16"
                       "female" "Moscow"
                                              "4" "Papa Johns" "4.9"
              "16"
"1"
                       "female" "Moscow"
                                              "5" "Best Pizza"
                                                                "2.3"
     "Anna"
"1"
     "Anna"
              "16"
                       "female" "Moscow"
                                              "6" "DinoPizza"
                                                                "4.2"
"2"
     "Andrey" "21"
                       "male"
                                              "1" "Pizza Hut"
                                                                "4.6"
                                "Moscow"
     "Andrey" "21"

Exercise 06

Checks for the file day01_ex06.sql

- The SQL script looks like below.

```
select action_date, person.name
from (
select order_date as action_date, person_id
from person_order
intersect all
select visit_date, person_id
from person_visits) as t1
inner join person on t1.person_id = person.id
order by 1 ,2 desc
```

- The result is below (raw ordering should be the same like below)

```
"2022-01-01" "Irina"
"2022-01-01" "Anna"
"2022-01-01" "Andrey"
"2022-01-03" "Peter"
"2022-01-05" "Peter"
"2022-01-06" "Nataly"
"2022-01-07" "Nataly"
"2022-01-07" "Denis"
"2022-01-08" "Denis"
"2022-01-09" "Elvira"
"2022-01-09" "Dmitriy"
"2022-01-10" "Dmitriy"
```

No

Yes

Exercise 07

Checks for the file day01_ex07.sql

- The SQL script looks like below.

```
select order_date,
    name || ' (age:'||age||')' as person_information
from person_order inner join person p on p.id = person_order.person_id
order by 1,2
```

```
2022-01-01 Andrey (age:21)
2022-01-01 Andrey (age:21)
2022-01-01 Anna (age:16)
2022-01-01 Anna (age:16)
```

```
2022-01-01
               Irina (age:21)
               Peter (age:24)

Yes

Exercise 08

Checks for the file day01_ex08.sql

- The SQL script looks like below.

```
select order_date,
```

name || ' (age:'||age||')' as person_information

from person_order natural join (select p.id as person_id,name, age from person p) as p order by 1,2

```
2022-01-01
               Andrey (age:21)
2022-01-01
               Andrey (age:21)
2022-01-01
               Anna (age:16)
2022-01-01
               Anna (age:16)
2022-01-01
               Irina (age:21)
2022-01-03
               Peter (age:24)
2022-01-04
               Kate (age:33)
2022-01-05
               Peter (age:24)
2022-01-05
               Peter (age:24)
2022-01-06
               Nataly (age:30)
2022-01-07
               Denis (age:13)
2022-01-07
               Denis (age:13)
2022-01-07
               Denis (age:13)
2022-01-07
               Nataly (age:30)
2022-01-08
               Denis (age:13)
2022-01-08
               Denis (age:13)
2022-01-09
               Dmitriy (age:18)
2022-01-09
               Elvira (age:45)
2022-01-09
               Elvira (age:45)
2022-01-10
               Dmitriy (age:18)
```

Exercise 09

Checks for the file day01_ex09.sql

- The SQL script looks like below.

```
select name
from pizzeria
where id not in (select pizzeria_id from person_visits)
```

- The result is below (raw ordering should be the same like below)

```
"DoDo Pizza"
```

- The SQL script looks like below.

```
select name
from pizzeria
where not exists (select 1 from person_visits pv where pv.pizzeria_id = pizzeria.id)
```

- The result is below (raw ordering should be the same like below)

```
"DoDo Pizza"
```
